- **7 DAYS /MONTH**, as it takes the OIO 4 weeks to fill in an endothelial cell when they are active
- **OF 2 ANTIBIOTICS, A BACTERIOSTATIC** TO OPEN THE CELL,
- **COMBINED WITH A BACTERICIDAL** to kill what is inside the cell
- **ALTERNATED COMBINATION** to avoid germs mutation,
- to avoid destroying normal cell, to allow normal intestinal bacteria to be restored
- n.b. considering the modern alimentation – antibiotics in meat and fish – a daily intake of probiotics is recommended.
- The treatment also includes vitamin B complex as the antibiotics impair their normal production.
- A proton pump inhibitor to protect the stomach from the antibiotics is also prescribed.
